

Established in 1952

WITH A LOCATION IN Wisconsin dairy country, the Company, now known as Commercial Testing Laboratory, which was founded as **Commercial Dairy Laboratory**, built a solid foundation by initially offering **milk sample testing to local dairy plants** in the northwestern and west-central part of Wisconsin.

As the Company grew and changed, we expanded our testing to **compositional and micro testing of all food products**. We expanded into a wide range of environmental testing that meets the needs of **dairy plants and processors**. We expanded our current clientele to include municipalities, industries, and homeowners all over the state.

Today, Commercial Testing Laboratory testing services include, **Food and Dairy Testing**, Environmental Testing, Agricultural Testing and Specialty Testing.

The Food Laboratory tests **Powders, Cheeses, Specialty Cheeses, Butter, Coffee Creamers (Dry and Liquid), Ice Cream, Organic Dairy and Food products, Meat Products, Mustards, Pizza Crust....** and CTL does Plant Sanitation, and the list keeps going on and on.

Commercial Testing Laboratory holds certifications from the Wisconsin Department of Agriculture, Trade and Consumer Protection and the Wisconsin Department of Natural Resources.

Our Sister Company, CTL Foods, Inc. is a dry blending and packaging facility. CTL Foods packages for private labels as well as our own Soda Fountain © Brand. CTL Foods holds a Food Processing and **Dairy Plant License** through the Wisconsin Department of Agriculture.
